Chris Lim

647-969-2468 | hello@hiimchrislim.co | github.com/hiimchrislim | linkedin.com/in/hiimchrislim

SKILLS Go, Java, Python, C, JavaScript, Postgres, MongoDB, MySQL, Redis, TypeScript , ReactJS, VueJS JWT

Docker, Docker-Compose IntelliJ, Goland, WebStorm,

ker, Docker-Compose Intellij, Goland, WebStorm VSCode, Pycharm, Eclipse

EDUCATION

Sep 2018 — Present

H.B.Sc. Information Security Specialist, University of Toronto

EMPLOYMENT HISTORY

Jun 2020 — Present

Technology Director, University of Toronto

- Managing the CSSC website repository (utmcssc.netlify.app)
- Hosting office hours (with or without appointment to provide student guidance)
- · Hosting workshops and developing content for student success
- Maintaining and overseeing the community projects with the Developers Student Club (DSC) (utm.developerstudentclubs.ca)

Technologies: Vue, Nuxt

Dec 2017 - Aug 2018

Coach, Hatch Canada

- Taught a group of 6 students aged 7-17 JavaScript Processing
- · Oversaw their assigned work, corrected and explained their mistakes to them
- Performed one-on-one teaching sessions to certain studdents that were having difficulties understanding the concepts
- Used simple analogies to clarify simple concepts to students

Technologies: JavaScript Processing, Hatch IDE

PROJECTS

Apr 2020 — Aug 2020

2ofClubs

- Created a tinder-like application to help students find suitable clubs based on a given set of criteria
- Created a RESTful API to perform CRUD operations upon Users, Events and Clubs
- · Used an ORM library to map structs to the database table definitions

Technologies: Go, GORM, PostgreSQL, Docker, ReactJS, TypeScript, JWT, CSS Bootstrap

Github: github.com/2ofClubsApp

Jan 2020 — Apr 2020

MapUTM

- Worked alongside with an upper year student mentor, professors and 5 other group members to create a web app that routes students to their classrooms within a 3D model of the school
- Used QGIS, a mapping software to create 3D models of our school buildings
- · Setup a centralized store using VueX to manipulate the various states within our application

Technologies: Vue JS, VueX, QGIS, CSS, Javascript

Github: github.com/SantiagoOrdonez/MapUTM

Aug 2019 — Aug 2020

Important Event Generator

- Developed an automated event generated that automatically places all school related events in your personal calendar
- Students are notified users when deadlines/important dates are approaching

Technologies: Python, Flask, OAuth2, Google Calendar API
